

*Erysimum* 'Apricot Twist'

After *E.* 'Bowles' Mauve', the most well known and widely available of the perennial *erysimums* is probably *E.* 'Apricot Twist'. In many respects it is not particularly remarkable – being a low-growing, bushy cultivar, with serrated, lanceolate leaves. But when it flowers, *E.* 'Apricot Twist' really comes into its own, with a superb display of vivid, intense orange flowers, sometimes striated with darker reds. It draws the eye irresistably and makes a perfect combination with blue irises or forget-me-nots.
